

**1 Sediment Filter:**

Sediment Filter reduces particles such as dirt and sand down to nominal microns in size and protects the oncoming filters. It eliminates the minute impurities such as rust, soil, sand and dirt.

**2 Pre-Carbon Filter:**

Pre-Carbon Filter absorbs and removes some of the harmful organic chemicals such as chlorine, detergents and other volatile organic compound pesticide.

**3 Reverse Osmosis Filter:**

R/O Membrane Filter removes the minute particles down to 0.001 microns, which is 1/100,000 the thickness of human hair. Metals, viruses, or bacteria larger than that size will be eliminated.

**4 Post-Carbon Filter:**

Post-Carbon Filter helps remove any remaining harmful chemicals, prevents the spread of bacteria, and removes the unpleasant tastes and odors from the water.
